INTRODUCTION

The statistics presented in this volume are based upon the population returns of the 29th September, 1939, derived from the compilation of the National Register.

The separate national statistics have been prepared by the respective Registrars General of the countries concerned, and have here been assembled for publication in a single volume issued under their joint authority. A uniform plan of presentation has been adopted in respect of the whole of the information which is available. Owing, however, to differences in the registration procedure in Northern Ireland, less information is forthcoming for that country than for Great Britain and the Isle of Man. These differences are described later.

Preparations for the National Register were begun at the end of 1938. It was possible to make executive arrangements for the purpose, notwithstanding that the National Register was not to be instituted unless and until war broke out, for the reason that those arrangements, viz. the division of the country into districts and the recruitment of enumerators, would in any case be required for the expected 1941 census, if the country remained at peace. Districts were planned, therefore, and enumerators recruited either for the National Register or for the 1941 census, whichever might be required. Apart from these essential preparations, the whole system of the National Register and of its maintenance was planned, and all schedules, forms, instructions and other documents drawn up, printed and distributed or stored in readiness for use if an emergency arose. Recruitment was gradual, and in some areas not completed until shortly before the outbreak of war. But all other preparations had been fully made by April 1939.

Authority for the establishment of the National Register was furnished by the National Registration Act, 1939, which received the Royal assent on the 5th September, 1939, two days after the outbreak of war, and by the Regulations, dated the 21st September, made under that Act. The Act applied to the United Kingdom; and was extended to the Isle of Man by an Order in Council dated the 8th September.

Finally, the whole machine in readiness was set in motion by an Order appointing the 29th September as the central date determining the time-table to be followed by 65,000 enumerators in the rapid distribution and collection of some 12 million household schedules and the issue of nearly 47 million individual Identity Cards.

It has been customary to include in the first volume of statistics published in respect of any census a detailed account of the census enumeration. This is an appropriate course in the case of an operation planned and executed for statistical purposes alone and wholly discharged of its functions before its first fruits can be presented. In the present case, however, many of the functions of the National Register are non-statistical; and the enumeration may be said to be the beginning, rather than the end, of its full activities. It would not be possible, therefore, to give a full account of the National Register without exceeding the proper scope of this volume; and the account which follows has been limited to those aspects of the enumeration which are relevant to the nature and quality of its statistical products only.

GREAT BRITAIN AND ISLE OF MAN.

In Great Britain and the Isle of Man the enumeration was planned, generally, on census lines. Following census procedure, the whole country was divided into enumeration districts, each district being separately plotted with specified boundaries and specified street and house contents. Regard was had to the contingencies of war conditions by reducing the standard of size of district with a view to greater speed of enumeration. The total number of enumeration districts

in Great Britain so planned amounted to rather more than 65,000 as compared with 49,000 at the 1931 Census ; and the whole of the planning was carried out by local Registrars of Births and Deaths under the direct instruction and supervision of the central offices in London and Edinburgh. In the Isle of Man it was undertaken by Town Clerks, Clerks to the Commissioners and Captains of Parishes.

In Scotland the work of supervising the actual enumeration also was performed by local Registrars ; but in England and Wales this duty was entrusted to the Clerks to Borough and Urban and Rural District Councils, appointed by the Registrar General of England and Wales with the consent of their Councils as National Registration Officers.

Persons included in the Register.—Subject to the specific exception of certain classes under the Act, registration was compulsory in respect of all members of the population present on National Registration Day, the 29th September. The excepted classes, as defined by the Regulations of 1939, consisted of persons :—

- (a) serving in and not on leave from His Majesty's Naval, Military or Air Forces ; or
- (b) qualified to be included in the Mercantile Marine Register.

The purposes for which the Register was designed were primarily concerned with civilians ; and the effect of exception (a) was to relieve the procedure of unnecessary returns in respect of members of the Armed Forces in naval vessels or barracks or other premises under Naval, Military or Air Force discipline. Complications in the returns of private households were, however, avoided by the inclusion of all persons present at the appointed time (other than billeted members of the Armed Forces) so that no distinction was necessary between non-civilians at home on leave and other members of their respective households. The former were removed from the Register on returning to duty ; but they appeared in the initial compilation and are, therefore, included in the accompanying statistical record.

As regards the second category (b) it was originally expected that a special Register would be set up to deal with the personnel of the Mercantile Marine. In fact, however, no necessity appears hitherto to have arisen for the creation of this special Register. No persons have thus become qualified to be included in it ; and merchant seamen, both at the appointed time and since, have been subject to the ordinary conditions of registration.

Information recorded in respect of each person.—The particulars required to be returned in respect of each individual were limited to the minimum which could be regarded as necessary for the purposes of the National Register as such, and are accordingly of a narrower scope than those of a modern census. They are set forth fully in the Regulations of 1939. In addition to the details of name and address (which have no significance in a statistical analysis) they comprised a statement of sex, date of birth, marital condition and occupation, with additional information, where appropriate, regarding membership of Naval, Military or Air Force Reserves or Auxiliary Forces or of Civil Defence Services or Reserves.

Enumeration Processes.—Census practice was generally followed in matters of principle and method. The individual returns were made on household schedules ; and responsibility for preparing the schedule was placed on the head of each household or, in the case of an establishment such as a hotel or institution, upon the manager or resident officer in charge, each of whom was required to supply the relevant record of every person who spent the night at the premises or arrived there the following day without having been enumerated elsewhere. Appropriate schedules of various types were distributed during the week preceding National Registration Day by the enumerator of each district, who had previously received detailed instructions as to the necessity of leaving no possible kind of habitation unvisited or unexplored.

In view of expected/evacuation movements enumerators were specifically warned to be on the watch for camps or other temporary premises likely to contain families or groups of persons in course of transit from one area to another. In the case of vagrants or homeless persons, a special single-person form was used, the distribution of which was undertaken by the police.

The collection of the completed schedules was begun early on the morning following National Registration Day and completed with the minimum delay or interruption. On receiving a schedule, the enumerator was required to scrutinize it to see that it appeared to be in order, and, if satisfied, to accept it and thereupon to prepare National Registration Identity Cards in respect of all persons on the schedule and to hand them to the householder in exchange for the schedule.

Some adaptations of the ordinary census procedure were introduced, either to provide for the foreseen consequences of abnormal war conditions or to ensure the personal delivery of Identity Cards. In the case of the homeless and certain other classes of persons whose schedules, for one reason or another, could not be collected by an enumerator, it was made the duty of the holder of the schedule to deliver it himself at the local registration office, where any special circumstances of the case were attended to and Identity Cards duly issued.

The correct filling up and delivery of the forms by householders or other responsible persons was accomplished with the aid of the instructions printed on the schedule itself, or given orally by the enumerator, coupled with the valuable assistance rendered by the generous publicity services of the Press and the British Broadcasting Corporation. Their important contribution to the success of the Register is gratefully acknowledged by the Registrars General.

An even more important contribution was that of the public itself. The nation as a whole and its individual members in their capacity as householders and private citizens gave their whole-hearted co-operation. Evidence was at once forthcoming of the adoption of a friendly and helpful attitude towards enumerators; and on every side was exhibited a sense of duty affording a remarkable illustration of the national unity and resolution from which it had sprung.

On the other hand the operations were greatly hampered by the direct and indirect consequences of the prevailing war conditions. Official evacuation schemes affecting children, expectant mothers and invalids, and the simultaneous dispersal of large numbers of business organizations as well as of private individuals, transferred millions of persons from homes in towns where a census would ordinarily have found them and deposited them in widely scattered areas all over the countryside. Such movements had, of course, been expected: but at no time could their magnitude or direction have been foreseen. The adjustment of the enumeration arrangements to meet the changed and changing population situation was not accomplished without heavy strain upon local and central staffs, aggravated in many areas by the simultaneous dispersal of enumerators already engaged and instructed in enumeration duties. The degree of dislocation varied considerably between one area and another, and was probably at a maximum in London.

This unprecedented population movement had one indirect consequence of an unexpectedly far-reaching effect. The evacuation of a great number of families left the enumerator in many cases unable to form any conclusive opinion whether premises had been wholly vacated or whether they were still occupied at night by a breadwinner absent at all other times in the course of his occupation. In the latter case contact proved exceptionally difficult; and whether the premises were or were not wholly vacated, they cost enumerators relatively heavy expenditure in visits to establish the true position and to obtain the return where due. These and other hindrances were aggravated by the "black-out", which curtailed the hours available for visits and in other respects slowed down the procedure.

All these special conditions undoubtedly offered considerable obstacles. Had not the original planning of the scheme allowed a substantial margin, and made much special provision, for the consequences of war conditions both foreseen and unforeseen, their effect would certainly have been more damaging. But in spite of the difficulties no breakdown occurred; and subsequent examination of the records tends to show that the enumeration was successful and complete throughout all areas of the country. The aggregate totals of the population registered appear to be fully consistent with the numbers anticipated from the trend of earlier estimates.

Later Stages of the Enumeration.—Excluding the small number of schedules delivered direct to local registration officers, the population record thus consisted of schedules containing particulars of more than 45 millions of persons and grouped in 65,000 enumeration district units. Under the scheme these original schedules had been reserved for the use of the local food authorities as a basis for the preparation of Ration Books and to constitute the local Food Register; and it had accordingly been provided that before each enumerator's schedules were surrendered for this purpose he should make a transcript of the returns to serve the purposes of the National Register. Thus the first duty of each enumerator after he had collected all his schedules and arranged them in approved order was the preparation of the transcript.

The factor which governed the grouping of the returns by enumeration districts was the address* of the household on the night of the 29th September, 1939. The enumerator was thus instructed first to exclude any schedules he might have collected from persons who had entered his district after National Registration Day, and then to copy the remainder into a special Transcript Book with which he had been supplied and which was to be the ultimate repository for the records originating in his district. On completing his book, he was instructed to count the number of persons entered and to record the number on the cover of the book. Checking of the Transcript Books was carried out by local registration officers before their despatch to the central offices.

Transcripts of the excluded schedules were made on separate slips; and these, together with similar slips prepared by local registration officers in respect of schedules handed to them direct, were ultimately despatched to the central offices in England, Scotland or the Isle of Man, where they were sorted to district of assignment and copied into the relevant Transcript Books as and when the latter were received.

Before parting with his Transcript Book each enumerator was also called upon to make a statistical analysis of its population content. It had been foreseen that the heavy administrative demands likely to be made on the National Register, when once it was in being, would leave little opportunity for statistical tabulation by the central departments, and that the principal man-power statistics afforded by the Register could not render their most useful service unless produced at an early stage of the war. It had been clear that in these circumstances the only practicable course was to arrange for a statistical analysis by each enumerator of the population of his district, and for the rapid aggregation at headquarters of the 65,000 abstracts thus compiled.

In view of the facts that there would be little opportunity of providing any full and detailed check upon the work and that enumerators as a class would be unfamiliar with the forms and methods of statistical analysis, it was necessary to make the operation as simple as possible by reducing the groupings and sub-grouping to the smallest possible dimensions. The enumerator was provided with a carefully prepared abstract sheet, designed so as to enable him to divide his population into the two sexes, each sex being subdivided into 9 birth-year groups and each birth-year group being further subdivided according to marital condition, viz. single, married, widowed or divorced. The sheet was accompanied by detailed directions for carrying out the analysis and for making a series of checks and cross-checks, both internally and against the total population previously entered on the cover of the transcript book. By these means the opportunity for error was reduced to a minimum. Sample checking was undertaken by the local registration officers to whom the abstracts were first delivered; and they were further scrutinized and tested at the central offices, where a number of errors of various types were discovered and corrected, after reference, where necessary, to the original Transcript Books. On the whole, the work was carried out systematically and accurately; and little evidence has so far been discovered to suggest that the results from this somewhat novel procedure are subject to any significant degree of error.

* Vagrants and homeless persons are recorded in a separate section of the Register. For statistical purposes they have been assigned to the areas in which their schedules were delivered up in exchange for Identity Cards.

Analysis in similar form was made at the central office of the records received on transcript slips ; and these were incorporated with the relevant enumerators' analyses during their assembly and aggregation to Districts, Boroughs, Counties, Regions, etc., as now shown in the accompanying tables.

The whole of the statistics contained in the present volume have been obtained in the first instance from the analyses thus described. No general reference to individual personal records in the register itself has been possible ; and there has accordingly been no opportunity of presenting the results in any alternative or more detailed form. Thus, apart from the areal distribution of the population, the present volume deals only with the information returned in respect of sex, marital condition and year of birth, touching which last it will be seen that the use of the date of birth in place of the more direct alternative statement of age, hitherto customary at a census, has been reflected in the tables by a form of presentation with which users of population statistics in this country may not be altogether familiar.

In concluding this part of this Report it may be useful to refer to two instances, one major and the other minor, in which the National Register statistics differ in principle or character from those of an ordinary census.

The major point concerns the local distribution of population. Census-taking aims at eliminating temporary movements, such as those due to industrial and other holidays, and endeavours to conform to a standard based upon "usual residence". Population as distributed upon the more stable lines of this conception moves but slowly, and its movements are usually continuous. Hence a census enumeration will serve as an adequate base line for a series of subsequent annual corrective estimates, and, subject to such estimated corrections, continues to afford statistics of local populations for a considerable period after the date of the enumeration.

The conditions of the present war present an entirely different picture and entirely different problems. Great movements of population have taken place which may be described as capricious, in the sense that they have followed no established lines of flow, and are isolated in statistical experience, without any element of continuity either with the past or with the future. The consequent distribution may or may not be temporary ; but the normal distinction between usual and temporary residence has lost much of its significance under prevailing conditions. In any case they are too large in volume and promise to be of too long a duration to be disregarded for the numerous practical purposes of administration for which local population statistics are employed.

For war purposes, therefore, and for the administration of peace services under war conditions, statistics of actual local populations, however abnormal and erratic, are what is needed ; and these are what the National Register is providing in this volume in respect of the point of time corresponding to the end of the third quarter of 1939. But the large-scale movement is not at an end ; and the re-distribution recorded in this volume was without any inherent stability. Movements subsequent to National Registration Day have been, and are likely to continue to be, equally capricious, and incapable of being gauged by the ordinary processes of estimation which are effective under stable conditions of regular and continuous movement.

Thus the statistics included in this volume will not suffice, as a census would suffice under ordinary peace conditions, to energize a series of periodical estimates of the population distribution at successive future intervals. Repeated resort will still be necessary to factual records of changes in the local distribution ; and it will be the duty of the National Register to provide these periodical figures.

In another, minor, respect differences of procedure have produced a difference in principle between the initial National Register record and a census enumeration. An ordinary census enumeration aims at including in the population present at the appointed time the population in ships of all kinds which, whether coming or going, are within territorial waters during the night of census day. Under a moving Register system, however, it appeared inappropriate to include the populations of outward bound vessels which, even if due to be registered on the above criterion, would immediately fall to be removed from the Register on passing out of the jurisdiction. Conversely, as all persons entering the United Kingdom

after the appointed time are required to be registered under the maintenance provisions of the Act, there appeared to be little point in discriminating between those whose inward voyages brought them within territorial waters during the night of National Registration Day and those who might enter the United Kingdom immediately after.

The result produced by the appropriate procedure has thus been that "shipping population" normally included in a census count has been excluded from the initial count of the National Register and included in part in the numbers added thereto under the maintenance provisions. Shipping population of this nature is not important in relation to the total population; but it may have local significance in relation to the contents of the port areas themselves, particularly since the maintenance procedure provides for the registration of incoming passengers in the areas of the residences to which they proceed on landing, and not in the areas of the port of entry.

NORTHERN IRELAND

The procedure by which the initial register was compiled in Northern Ireland differed in certain material respects from that employed in Great Britain and the Isle of Man. No independent enumeration on census lines was carried out on the 29th September, 1939; in lieu thereof recourse was had to the contemporaneous returns obtained by the Food Control authorities for the purpose of rationing.

Application forms for ration books were delivered to all householders on or about the 25th September, 1939, through the local organization of the General Post Office. They were not delivered or required for inmates of institutions, whose food needs were to be met by a scheme of bulk supply, nor for serving members of the Armed Forces who were outside the operations both of the Food Control and National Registration measures.

Each householder was instructed to include in his return all members of his household, including those who were temporarily away. This requirement incidentally led to a certain amount of duplicate registration, through the inclusion of a person both at his home address and also at some other address.

The completed forms were returned during the ensuing period to the local food offices where the ration books were written; and they were subsequently transmitted to the Registrar-General of Northern Ireland in Belfast to form the basis for the issue of Identity Cards and the preparation of the National Register. In compiling the initial Register, late applications have been admitted in respect of persons who should have been included amongst the original returns; and at the same time cases discovered of duplicate registration have been eliminated.

As previously stated the register in Northern Ireland excludes inmates of institutions (as distinct from nurses, domestics, etc.) as these were not required to be included in applications for ration books. In order however to secure comparability in the statistical returns in Table I of this volume which combines the records of all the component parts of the United Kingdom, an allowance for this excluded class has been incorporated in the Northern Ireland figures. As there appear at present to be no independent figures of the numbers and distribution of the excluded class allowance has been made on the basis of the figures provided by the 1937 census. There is no reason to suppose that there is any material difference between the 1937 and 1939 position as regards this small section of the population.

No analysis either by sex, age or marital condition has been made of the population included in the Northern Ireland section of the National Register. Total figures alone are available and have been included with the corresponding figures in the relevant section of Table I.

STATISTICAL NOTES

The combined National Register populations of the United Kingdom and the Isle of Man as derived from the initial enumeration at the end of September 1939, amounted to 46,895,914. The constituent national totals are set out hereunder. In regard to the figures for Great Britain and the Isle of Man it is to be observed that they have been derived wholly from counts made by enumerators and furnished in summary form through their respective local registration officers. Past census experience shows that there is usually a small difference between summaries thus furnished and the result of the direct examination of the original records at head office, but it is not material as a rule in relation to the magnitude of the totals, and ought to be of even less significance in present circumstances on account of the additional checks imposed by the analytical operations which were undertaken by the field staff. In the case of Northern Ireland, the count was made at the head office in Belfast; but the precision of the record has been to some extent affected by the method employed in the collection of the original data and by the omission of inmates of institutions in respect of whom an estimated addition of 12,698, derived from the 1937 census returns, has been included in the total shown below.

NATIONAL REGISTER POPULATIONS, 1939

			<i>Persons</i>	<i>Males</i>	<i>Females</i>
England and Wales	40,651,706	19,074,099	21,577,607
Scotland	4,907,619	2,296,367	2,611,252
Northern Ireland	1,285,760	*	*
Isle of Man	50,829	22,475	28,354
United Kingdom & Isle of Man			46,895,914	*	*

Corresponding National Register populations (without distinction of sex in the case of Northern Ireland) are set out in Table I for a range of subdivisions of the countries comprising Regions, Counties, Towns and Rural areas.

For the purpose of comparison with standard population records, such as those associated with previous censuses or with current estimates, the above figures are not suitable as they stand on account of the fact that two sections of population are, as stated earlier, excluded from the National Register totals, viz. (a) persons serving in and not on leave from His Majesty's Naval, Military or Air Forces and (b) populations on ships in or nearing port.

Precise evaluation of the excluded sections is not possible, but from available material it is believed that they would account together for rather more than a million persons, or say 1,010,000, almost exclusively male, and apportioned between the three main sections of the Kingdom in round figures as follows:—England and Wales 900,000, Scotland 100,000 and Northern Ireland 10,000.

After adjustment of the National Register figures with these allowances, a total of 47,906,000 is reached for the whole of the United Kingdom and the Isle of Man combined. While from the nature of its construction this total is not entitled to the authority of a direct count, it can probably be regarded as valid within a margin of error which should not exceed $\frac{1}{2}$ per thousand. The correspondingly augmented totals for the three main sections would be as follows:—England and Wales 41,552,000, Scotland 5,008,000 and Northern Ireland 1,296,000, and these figures are used for comparative purposes in the following paragraphs.

GREAT BRITAIN

The present total of 46,560,000 is the largest hitherto reached in Great Britain. It exceeds the number returned at the census of 1931 by 1,765,000 or 3·9 per cent., which, when allowance is made for the differing dates of record, corresponds to an average annual increase in population of 0·47 per cent. It is of interest to observe that this average is the same as the similarly computed annual average rate of increase in the preceding decennium 1921–1931.

* National Register figures not available. The number of males and females enumerated at the 1937 census of Northern Ireland were 623,154 and 656,591, respectively.

Comparative figures showing the growth of population in Great Britain and its two national divisions at successive enumerations since 1801 are shown in the following table. They are pictorially displayed in diagram A.

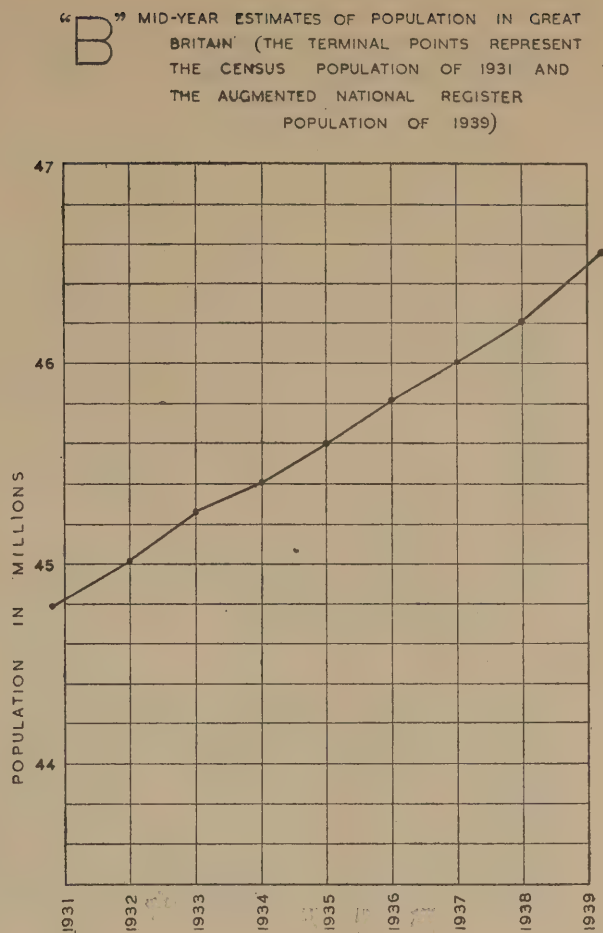

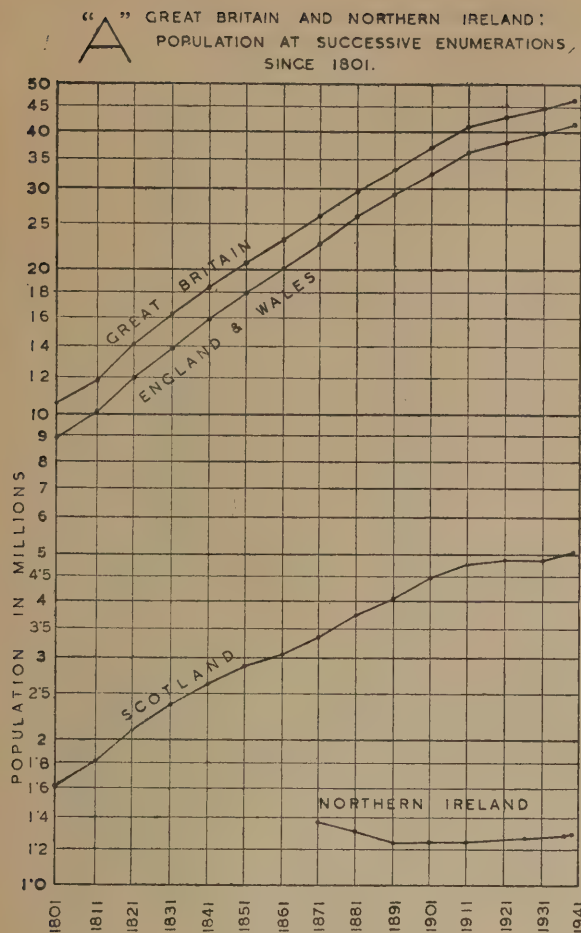

TABLE A.—GREAT BRITAIN: POPULATION 1801-1939
(Numbers in thousands.)

Date of Enumeration.	Great Britain.			England and Wales.			Scotland.		
	Popu- lation.	Increase.		Popu- lation.	Increase.		Popu- lation.	Increase.	
		No.	%		No.	%		No.	%
1801, March 9/10 ..	10,501	—	—	8,893	—	—	1,608	—	—

1861, April 7/8 ..	23,128	2,311	11.1	20,066	2,138	11.9	3,062	173	6.0
1871, April 2/3 ..	26,072	2,944	12.7	22,712	2,646	13.2	3,360	298	9.7
1881, April 3/4 ..	29,710	3,638	14.0	25,974	3,262	14.4	3,736	376	11.2
1891, April 5/6 ..	33,029	3,319	11.2	29,003	3,029	11.7	4,026	290	7.8
1901, March 31/April 1 ..	37,000	3,971	12.0	32,528	3,525	12.2	4,472	446	11.1
1911, April 2/3 ..	40,831	3,831	10.4	36,070	3,542	10.9	4,761	289	6.5
1921, June 19/20 ..	42,769	1,938	4.7	37,887	1,817	5.0	4,882	121	2.5
1931, April 26/27 ..	44,795	2,026	4.7	39,952	2,065	5.5	4,843	-39	-0.8
1939, Sept. 29/30 ..	46,560	1,765	3.9	41,552	1,600	4.0	5,008	165	3.4
<i>Equivalent 10 yrs. increase</i>	—	2,093	4.7	—	1,897	4.7	—	196	4.0

An incidental feature revealed in this series is that the decrease of population recorded for Scotland in respect of the period 1921-1931—the only decrease shown in the table—has been now reversed by a period of growth substantially greater than that of either of the previous periods since the 1914-18 war. The more important general feature of interest which is disclosed, however, is the somewhat abrupt change in the steady sequence of population increases dating from the period of the last war; prior to that time the annual rate of growth had been consistently of the order of 1 per cent. or more, but immediately after it dropped to rather less than half that figure at which lower level it has been maintained ever since.

Much natural concern has been expressed in recent years in regard to the prospect of a decline in the population of this country. What is happening at the present time has not, however, always been clearly understood. It must again be emphasized that up to now the population has been steadily increasing; not only has no decline been so far registered but there is no evidence as yet of the gradual tapering away of the successive increases which would ordinarily be expected to precede the attainment of a peak total as the immediate precursor of an ultimate fall. But it is of course useless under present circumstances to attempt to speculate on likely population conditions either of the remote or the immediate future. The significance of peace time trends will be profoundly influenced, if not rendered meaningless, by the occurrence of a state of war; and if the length and intensity of the present struggle prove at all comparable with that of 1914-1918, its consequences will be reflected in the population record for many years to come.

The new figures broadly confirm the annual estimates of the population of Great Britain derived from the reports of the Registrars General published year by year since 1931. Diagram B, in which they are shown together, suggests at first sight that there may have been a slight degree of under-statement in the estimates of the most recent years. This of course may be true; but it has to be remembered that in the case of males, the new figures are themselves subject to a margin of error in respect of the unverified allowances included for non-civilians and shipping population. Moreover, in case of both sexes, the onset of the war must have imposed immediate restrictions upon migration during the month of September and may well have been responsible for a significant diversion of the normal course of population movement during that period.

In the following table the 1931-39 increase of population is resolved into its principal component elements; and these are accompanied by similar comparative analyses for earlier intercensal periods.

TABLE B.—BIRTHS, DEATHS, AND MIGRATION, 1871-1939.
(figures in thousands)

Period.	Great Britain.			England and Wales.			Scotland.		
	Births.	Deaths.	Gain or Loss (—) by Migration (All Types).	Births.	Deaths.	Gain or Loss (—) by Migration (All Types).	Births.	Deaths.	Gain or Loss (—) by Migration (All Types).

1911-21	9,466	6,019	— 1,509*	8,281	5,268	— 1,196*	1,185	751	— 313*
1921-31	7,935	5,344	— 565	6,930	4,692	— 173	1,005	652	— 392
1931-39 (8.4 years)	5,886	4,639	518	5,137	4,092	555	749	547	— 37
10 years equivalent	6,981	5,503	615	6,093	4,854	658	888	649	— 43

* Includes the deaths of non-civilians which occurred abroad during the 1914-18 war, estimated at 577,000 (England & Wales) and 74,000 (Scotland).

The analysis of the 1931-39 period is further extended in Table C to show the movement of the component elements by calendar years.

Though, as already remarked, the total growth of population in the period since 1931 has been on a scale roughly commensurate with that of the ten years prior to 1931, Table B shows that the composition of the later increase is of a far less satisfactory character. Both of the components representing the natural elements of birth and death have moved in an unfavourable direction—seriously so in the case of birth; and but for the compensation of an apparently adventitious change of considerable magnitude in the direction of migration, the population position might have legitimately given rise to even greater public concern than it has already done.

TABLE C.—BIRTHS, DEATHS, AND MIGRATION, 1931–1939.

1939 (first 3 quarters)	546	426	83†

* From Board of Trade returns. The figures exclude movements over the land frontier between Northern Ireland and Eire.

† First half of year only.

Births over the years 1931–39 averaged 15·3 per 1,000 population per annum as compared with an average of 18·7 in the preceding 10 years, thus marking a further fall of more than 18 per cent. in the steep decline which has been the outstanding feature of the birth rate history of Great Britain during the past 60 years. The experience is amongst the lowest of all countries for which records are available; and the lowness is of extreme significance in that as a measure of fertility it is between 20 and 25 per cent. below the level which will have to be recovered and maintained if a future decline in population is to be avoided.

On the other hand the long fall at last shows signs of having been arrested. The lowest level touched was that of 14·7 per thousand in the year 1933, since when there has been a minute but continuous improvement raising the rate to 15·4 in 1938. In actual numbers, the present level of births is not inordinately low, as their maintenance at the current figure of about 700,000 per annum would be sufficient under peace conditions to sustain and stabilize the population at or near its present size. But the maintenance of an annual 700,000 births could only be achieved by a gradual increase in fertility sufficient to compensate for the decreasing number of women who are now passing into the child-bearing period. Whether such increase in fertility is to be realized or not depends on many factors, into a discussion of which it is not possible to enter within the limits of the present Report.

In regard to deaths, mortality, as measured by standardized rates which make allowance for the changing age distribution of the population, shows a further substantial decline between the two periods 1921–31 and 1931–38 amounting to 11 per cent. in England and Wales and 10 per cent. in Scotland, thus reducing it to a level of about one-half of what it was at the beginning of the century. Notwithstanding this welcome and apparently continuing improvement, the annual number of deaths now tends to rise rather than fall owing to the increasing proportions of the population at the older ages where the death frequencies are highest; and there is accordingly little likelihood of any numerical compensation from this factor to set against a future insufficiency in the numbers of births.

The movement of population not accounted for by the difference between births and deaths is shown in Table B to have been inward on balance and to have resulted in a net gain of 518,000 persons or nearly one-third of the total population increase of 1,765,000. This result is noteworthy as being in complete contrast to the similar records shown for the six previous decennia, in all of which migration, though irregular in amount, has been consistently outward on balance. It has to be borne in mind that balances so shown are merely differences between primary movements of much larger character in opposing directions and that changes in either of the direct movements may have a quite disproportionate effect on the difference series. From such evidence as is available from the Board of Trade records in regard to true migrants as distinct from temporary travellers, it would appear that both emigration and immigration have fallen in volume

during recent years, but that it is predominantly to the reduction of emigrants to a fraction only of their former weight of numbers that the change in the direction of the balance is now due. It will be observed that in Scotland the balance of migration, though greatly reduced, was again outward in direction, an indication, no doubt, of the continued movement of population from Scotland to England.

NORTHERN IRELAND

The National Register population of Northern Ireland (including an allowance, based on the 1937 census record, for inmates of institutions not individually identified in the register) amounted to 1,285,760 persons. For comparison with ordinary census figures, however, a further allowance for non-civilians and shipping population outside the scope of the National Register Act must be added. From independent records dealing with these classes, it is indicated that their numbers at the end of September 1939 were of the order of 10,000, which accordingly raises the register figure to a national total of some 1,296 thousands. This figure is more than 16 thousands in excess of the 1937 census total enumerated 2 years and 7 months earlier. In view of the fact that the population had only increased by 23 thousands in the eleven years preceding 1937, the indicated increase of 16 thousands in rather more than $2\frac{1}{2}$ years appears to be abnormally high. It is possible that the register figures themselves may still be subject to an element of undetected inflation through duplication of record or that the allowances made for the excluded classes are excessive, though there has undoubtedly been an increase during recent months in the numbers sent over from Great Britain to Northern Ireland for training in military units stationed in the latter area.

An analysis of recent population movements affecting Northern Ireland will be found in the Preliminary Report on the 1937 census published by the Registrar-General of Northern Ireland.

ISLE OF MAN

The National Register population of the Isle of Man amounted to 50,829 persons and exceeded the number returned on the occasion of the census of 1931 by 1,521 or 3·4 per cent. It is estimated that at the time of the enumeration approximately 1,000 normal residents were absent from the Island serving in His Majesty's Naval, Military or Air Forces or on Manx vessels employed on transport service.

Comparative figures showing the changes in the population of the Isle of Man since 1821 are given in the following table.

TABLE AA.—ISLE OF MAN—POPULATION 1821-1939.

Date of Enumeration as in Table A	Population	Increase		Date of Enumeration as in Table A	Population	Increase	
		Number	Per cent.			Number	Per cent.

1871	54,042	1,573	3·0	1939	50,829	1,521	3·1
1881	53,558	— 484	— 0·9				

DISTRIBUTION OF POPULATION WITHIN GREAT BRITAIN

In considering the distribution of the population within the country as presented by the National Register records it is important to bear in mind that it differs from similar distributions obtained from normal peace time records to an extent which will impair, if it does not altogether destroy, the value of any comparisons between the one and the other.

In the first place the National Register totals do not embrace the whole population since, as has already been explained, they exclude non-civilians actually serving with the forces and also the population of ships in or nearing port. For the country as a whole it has been possible to estimate these excluded sections within reasonable limits and an addition equal to about 4·7 per cent. of the male population or 2·2 per cent. of the total population has been regarded as a reasonable corrective to bring the register totals into harmony with census records. But for portions of the country this procedure is not possible, as the incidence of the excluded elements varies widely in different areas and the necessary material is not available for its assessment. All that can be done is to point out that the disturbance is likely to be greatest where the said exceptions are prominent, i.e. in ports in respect of shipping population and in districts containing barracks or other service establishments in the case of non-civilians.

But the greater and more widespread disparity arises from the fact that the National Register enumeration was undertaken immediately after the official and private evacuation of large sections of the population from many of the more congested urban areas. This subject has already been discussed from its broader aspects; and it is sufficient here to observe that in view of the scale and ubiquity of these movements it is impossible to isolate or assess the effect of any other factor which may have contributed to the ascertained changes in local populations.

Evacuation, Reception and Neutral areas are severally identified in Table I from which it will be found that only 268 out of a total of 1,470 Boroughs and County Districts in England and Wales and 41 out of a corresponding total of 228 in Scotland are scheduled as neutral areas under Government evacuation schemes. From many of these in the neighbourhood of industrial areas it is known that much private evacuation has taken place. Since the whole of the abnormal movement took place within a month or so prior to National Registration Day, it will be more accurately measured by reference to a peace time population of more recent date than that of the 1931 census; and for this purpose the mid 1938 estimate of each area as published by the Registrars General in their annual publications has been included as an additional measure of comparison in Table I. The mid-1938 estimate, which is the latest at present available, has not the authority of an enumeration, but judging by past experience, it may be relied upon broadly to mark the division between the normal peace time trends operating prior to the war and the different and quite exceptional movements that have occurred since.

The following table shows approximately how the recent variations in the population were distributed in the geographical regions and large density aggregates in which it is customary to summarise the records. The constitution of the regions is shown on page xxxii.

Prior to the outbreak of war and the consequent population disturbance, the regional movement, as reflected by the increases and decreases for the period 1931–1938, continued, in large measure, the experience of the previous decennium 1921–1931, though with some exceptions worth noting. Bearing in mind that the 1931–1938 period relates to 7 years only, the general population drift towards London and the South Eastern counties which was the outstanding feature of the previous decennium will be seen to have been more than maintained. The gain is a little more marked on this occasion in the surrounding counties than in the metropolis itself, but it is consistently high and in the South Eastern region as a whole the increase is practically two and a half times that of the country at large. The Midland regions (M1 and M2) are the only others in which the increase is in excess of that of England and Wales, again repeating the experience of the previous decennium. The industrial sections of the Northern region (N1, N3 and N4) all show progressive deterioration, the small earlier increase in Northumberland and Durham (N1) having now been converted to a more material decline, and the West Riding of Yorkshire (N3) and Lancashire and Cheshire (N4) having barely maintained their 1931 positions after moderate increases in the preceding decennium. In both regions of Wales, the 1921–31 decline has been continued, with considerable acceleration in the coal mining areas of W1, to which is assigned the biggest fall shown in the table. In Scotland on the other hand, the slight decline recorded between 1921 and 1931 has once more been superseded by an increase equivalent to that of England and Wales, and located mainly in the two central regions identified within that country.

It is of interest to observe from the Density Summary of England and Wales that outside Greater London, such abnormal growth as is recorded for the period 1931-1938 is located in the smaller towns where the aggregate rate of increase was more than 50 per cent. in excess of that of the whole country. This is in contrast to the position of the County Boroughs, which barely maintained their 1931 level of population. In Scotland, large Burghs and small Burghs increased at rates rather higher than that of the total country, both of them at the expense of the rural landward areas.

As regards the change shown for the period 1938-1939, i.e. from mid-1938 to the 29th September, 1939, it has already been explained that the 1939 figures are not strictly comparable as they stand with the estimates of 1938, in that the former exclude non-civilians, etc., estimated for Great Britain as a whole at about 2.2 per cent. of the total enumerated, so that the decrease of 1.4 per cent. shown in the table for Great Britain is compounded of a real increase of 0.8 per cent. abated by the 2.2 per cent. in respect of the section excluded from the 1939 count.

The real increase of 0.8 per cent. is that which has occurred through the natural forces of birth and death and the balance of external migration; in amount, it would appear to be about one-quarter of the corresponding increase of the preceding period 1931-1938.

In the same way, the 1938-1939 increases and decreases shown for Regions are compound effects subject to the same factors as those referred to in respect of the total population, namely, the exclusion of excepted classes from the 1939 figures and the forces of birth, death and migration, but with the difference that migration is not limited to movements to and from Great Britain as a whole but includes also internal migration as well. And as the bulk of the internal migration of the 1938-39 experience will have been due to emergency evacuation, the major interest in the record is likely to be found in the evidence it provides of the weight and incidence of the evacuation movement. This cannot be identified and separated precisely from the other contributory factors but a sufficient approximation thereto will probably be provided by the following broad treatment.

Since regional differences due to variations in the incidence of births, deaths, external migration, and the excepted 1939 classes are likely to be small in relation to the incidence of evacuation, the former may, in the absence of independent local records, be allowed for by assuming that local experience is similar to that of the country at large and that they were throughout responsible for a population increase of 3.2 per cent. over the years 1931-38 and a reduction in 1938-39 of 1.4 per cent. By deducting these percentages from the experienced regional movements, as is done in Part (iv) of Table D, the movement incidence is circumscribed to that arising from internal migration in the two periods. If it be further assumed that the ordinary peace time trend of inter-regional migration, as evidenced by the 1931-38 movements, continued to operate up to say August 1939, then the evacuation element alone would be represented by the difference between the total internal migration of the period 1938-39 and one-sixth of the corresponding movement in the 1931-38 period and on this basis it has been calculated and set out in Part (v) of the table.

From these figures it will be seen that the only region which appears to have suffered a serious loss of population through evacuation is that of Greater London, which contains few neutral areas and no reception areas and where the decline on this account amounts to as much as 16.6 per cent. or a number of the order of 1,440 thousands of persons. In a similar way, a loss of the same character but of the much smaller dimensions of rather more than 2 per cent. is indicated for region N1 (Northumberland and Durham) and a possible fractional loss for Lancashire and Cheshire (N4). All the remaining regions of England and Wales would appear to have gained on balance by the movement, the highest relative receptions being those indicated for W2 (North and Central Wales) and the South West region (12 per cent.), the portion of the South East region outside Greater London (nearly 11 per cent.) and East region (nearly 7½ per cent.). In Scotland both the East and West Central regions had temporarily lost population by evacuation on the 29th September, 1939 to the approximate extent of between 3 and 4 per cent. and between 2 and 3 per cent. respectively, the corresponding receptions being proportionally greatest in the Southern region (over 9 per cent.), but numerically so in the Northern area.

Outside Greater London, the large towns, both in England and Wales and also Scotland have, in the aggregate, lost population on balance by evacuation (England and Wales—between 2 and 3 per cent. ; Scotland over 6 per cent.) to the benefit of both the smaller towns and the rural areas, the gains being proportionately similar in these two classes of area in Scotland but in favour of the rural areas in England and Wales.

The region, however, is too large a unit to provide a satisfactory picture of the incidence of local evacuation movements. Of the three types into which the areas of the country have been scheduled under Government evacuation schemes, viz. evacuation, neutral and reception areas, only one region, that of W.2, is confined exclusively to one type. All the others embrace at least two types and most of them all three, so that grouping the different types within regions not only tends to under-rate the inter-regional movements by relating them to the total regional populations, but completely ignores transfers of which both origin and destination are within a regional boundary itself.

For a more comprehensive indication of the movement, the unit areas must be aggregated according to type as is done in Table E, though even here the classification, based upon official designations, is not precise, since many of the areas classed as neutral are known to have been affected by the evacuation of private individuals and commercial staffs outside the scope of official measures.

From these figures, the evacuation movements themselves have been isolated from other contributory factors of increase and decrease in the approximate manner already described in connection with the previous table and they are summarized below in Table F.

TABLE F.—TRANSFERS OF POPULATION THROUGH EVACUATION AS AT 29TH SEPTEMBER, 1939.
(Negatives = losses ; positives = gains)

	Evacuation Areas.		Reception Areas.		Neutral Areas.	
	Per cent.	Numbers in thousands.	Per cent.	Numbers in thousands.	Per cent.	Numbers in thousands.

England and Wales	-13.0	-1,939	12.3	1,990	-0.3	- 30
Regions—						
South East	-19.4	-1,478	17.8	764	-5.3	-137
North	- 8.0	- 416	10.3	368	0.7	30
Midland	- 2.3	- 46	9.5	300	1.7	35
East	- 5.2	- 6	9.4	141	0.8	2
South West	—	—	14.3	264	-6.0	- 14
Wales	—	—	7.7	142	4.4	27
Scotland	- 9.6	- 176	9.2	168	-0.6	- 8

This analysis is designed to show the broad features of the movements ; it does not purport to be precise and no attempt has been made to secure that the respective gains and losses exactly balance one another.

So far as the classification of the areas is concerned, it will be observed that in those designated neutral there is evidence of both losses and gains. And in every section of the country identified it is probable that the figures in the last two columns of the table represent neither evacuations nor receptions alone but merely the balance between them, and are therefore no direct guide to the magnitude of the separate movements in either direction. In respect of the South Eastern counties, for example, with which the bulk of all evacuation movements has been associated, it has been a matter of common experience to find in the neutral areas adjoining London that many residents have sought shelter away from their own homes and that their places have been taken at the same time by refugees from the greater risks of the more central areas of the metropolis. It is clear therefore that the estimated loss of 137 thousand for these areas does not represent the whole of the outward movements, and that a similar incompleteness of representation must be assumed to attach to the records of neutral areas in other sections of the country. In the specifically designated evacuation and reception areas, the movements will have been practically wholly of the one-way type and their records will not be subject to the reservations and mutual counteractions of those in neutral areas.

Altogether it would appear, when regard is had to some under representation in respect of the neutral areas, that in the whole of Great Britain more than two-and-a-quarter millions of people, or 5 per cent. of the total population, left their homes for safer areas at or immediately after the outbreak of war. Of these, three-quarters were resident in the South Eastern area ; and from the evacuation areas of that region the loss was equivalent to the much higher percentage drop of 20 per cent. or one in every five of the population there exposed to risk. From the evacuation areas of the Northern regions of England and Wales, the loss was of the order of 400 thousands or 8 per cent. and from the similarly selected areas in Scotland, it reached nearly 10 per cent. of the population involved, though the actual numbers were less than half those of the Northern regions of England and Wales.

The destinations of the refugees, as might be anticipated, were more widely scattered throughout the country. About one-third found shelter in the reception areas of the South East region where they swelled the local populations to the

extent of about 18 per cent. In the South West the additions through this movement amounted to some 14 per cent. of the local populations, while in the North, Midland and East Regions it was of the order of 10 per cent., in Wales 8, and in Scotland 9 per cent.

Within the aggregates representing evacuation and reception areas there is a wide variety in the incidence of the two movements and it is necessary to refer to the individual areas themselves for evidence of the more extreme disturbances.

The outward movement, as might be expected, reached its maximum in respect of the Administrative County of London the whole of which is scheduled as an evacuation area. Here the exodus of probably more than 900 thousand persons was equivalent to a loss of nearly 23 per cent. of the total population. In the more central Boroughs it was well above the average for the whole county and may even have reached 30 per cent. or more in Holborn, Westminster, St. Marylebone and Chelsea.

As a guide to the more prominent features which have distinguished the movements in areas outside London since the last census, the following record is appended of the areas showing the largest percentage decreases and increases between the enumerated populations of 1931 and 1939 as appearing in column 12 of Table I. The total movement in each case has been apportioned between the two periods 1931-38 and 1938-39 with the object of identifying that part of it which will have been influenced by the special conditions of the 1939 enumeration so far as the available records enable this to be done.

The highest decrease in the table is that of 31·7 per cent. recorded for West Ham C.B. and there are 18 others with decreases amounting to 20 per cent. or more. Prominent amongst them are towns adjacent to London; and as the bulk of their losses are assigned to the last year of the period they will have been due preponderantly to evacuation. At the same time many of these areas were declining in population prior to 1938; and where this was at all significant it must be presumed to have contributed in a minor degree to the greater decreases of the 1938-39 period. The extent of the latter is also influenced by the fact that non-civilians and shipping populations have been excluded from the 1939 enumeration but not from the records of 1931 or 1938; and this no doubt largely accounts for the presence in the list of military areas such as Aldershot, Farnborough and Richmond (Yorks) and of port towns like Portland, Gillingham, Portsmouth, Sheerness and Dover though any of these areas may well have suffered losses by evacuation in addition. In the three Banffshire towns of Findochty, Buckie and Portknockie, the decrease must, no doubt, be mainly ascribed to the exclusion of members of the fishing population at sea on National Registration night.

From the lower half of the table it will be seen that the range of increases between 1931 and 1939 is on a much wider scale than that of the decreases. And as, in the case of most of the areas there identified, the growth was proceeding at a rapid rate prior to 1938 it will usually have been due to exceptional residential development of an otherwise normal character and it will not ordinarily be possible to identify that portion of it (if any) to be assigned to the influx of evacuees. Where the bulk of the increase has occurred since 1938 and no other explanation is available, as in the case of Tonbridge R.D., the evacuation factor may be suspected. But the possible existence of special local factors must not be overlooked such, for example, as the temporary influx of seasonal hop pickers which is in large part responsible for the increases shown for Cranbrook R.D. and Ledbury R.D. or the presence of a German refugee camp to which the increase in Sandwich M.B. is due. Notwithstanding their presences in the list of largest increases, towns like Chislehurst and Sidcup, Bexley, Carshalton, Harrow and East Barnet would appear to have lost rather than gained population as a result of evacuation transfers.

SEXES, AGES AND MARITAL CONDITIONS (GREAT BRITAIN)

SEXES

When allowance is made for the male classes excluded from the National Register, the males and females of Great Britain may be regarded as numbering 22,370 thousands and 24,189 thousands respectively in 1939. The excess of females thus numbers 1,819 thousands, which amounts to 7·5 per cent. of the female total, and is represented by the ratio of 1,081 females to 1,000 males.

Dunoon	Argyll	11,478	7,902	8,780	45·2	— 10·0	30·7
Kingussie	Inverness	1,394	981	1,067	42·1	— 8·1	30·6

Comparison with the femininity proportions at previous censuses of Great Britain from 1841 is as follows :—

Year	Females per 1,000 males	Year	Females per 1,000 males
1841	1,055	1901	1,067
1851	1,050	1911	1,067
1861	1,060	1921	1,094
1871	1,059	1931	1,087
1881	1,058	1939	1,081
1891	1,064		

Prior to 1911, the change in proportions was irregular but with a rising tendency on the whole, and this was followed by a jump in 1921 which was much greater than the whole of the previous changes recorded in the table and was a direct consequence of the losses of men in the 1914–18 war. Since 1921 the maximum has been slightly abated by the high masculinity of the subsequent births but the proportion is still outstandingly higher than that of any period prior to 1921.

The excess does not affect all ages alike ; and a more informative picture of its incidence and recent changes is given by the following illustrative table in which the 1939 proportions of England and Wales comprising 89·2 per cent. of the total population of Great Britain, and based upon population age estimates obtained in a manner to be described later, are set out in comparison with those of the censuses of 1921 and 1931.

85 and over	2,040	2,143	2,275	26	35	51

In the main, the 1939 proportions exhibit the characteristics which have always attended this type of record, namely, an excess of males at the youngest ages, due to the preponderance of males at birth, which is gradually reduced as a result of the higher mortality experienced by that sex to a position of equality with the females at or about the ages of adolescence, and is then converted to a female excess with a progressively increasing tendency thereafter up to the end of life. But, besides the more fundamental features, the records contain evidence of other influences of less regular character. The most notable is the abrupt augmentation of the female excess in the 1939 series between the ages of 40 and 60 ; it corresponds to similar excesses between 30 and 50 in 1931 and between 20 and 40 in 1921, and is obviously a reflection of the losses of men in the 1914–18 war.

This must remain a feature of the population record, at advancing ages, until the whole of that war generation has passed away. Another factor which has influenced recent records in this series is the rise which occurred in the masculinity of the birth rate immediately after the last war, and the higher level at which it has been maintained ever since. The result of this has been that the male excess at the youngest ages commences at a higher figure and extends to a later age than it did formerly, a transposition which has been assisted also by the simultaneous diminution that has taken place in infant and child mortality.

Males are in excess of females at ages up to 15 by 110 thousands as compared with 96 thousands in 1931 and 70 thousands in 1921, while in the age group 15-20 where females were in excess in the past, males are now shown as predominating by a small majority.

A more significant change is that recorded for the age group 20-30, the period at which the bulk of marriages occur. In 1921 females outnumbered males by more than half a million in this group, but by 1931 the excess was reduced to less than 200 thousands and is now only 67 thousands, yielding a proportion of 1,021 females per 1,000 males as compared with a proportion of 1,113 in 1911 prior to the last war.

It is necessary to add that the excesses and proportions at the young adult age periods in 1939 are subject to possible error in that they depend upon the estimated additions made to the male population in respect of the classes excluded from National Registration.

The cumulative effect of differential mortality between the sexes produces its maximum impression at the more advanced ages where there is a rapid acceleration of the female preponderance, the proportions rising rapidly after age 70 and reaching the ratio of more than two females to one male in the final age group shown in the table.

AGES

Compared with the type of age analysis that is usually associated with a census record prepared in a central statistical office with access to tabulating machinery, the age statistics available from the National Register enumeration will be found to be restricted in scope and presented in a somewhat unfamiliar form. The original analysis in this case was performed, not by the staffs of the Registrars General, but by the district enumerators, and the contribution of the central offices was limited to aggregating the separate enumeration analyses up to Towns, Country Districts, Counties, etc. This procedure had the advantage of accelerating the production of the record by spreading the work over the 65,000 enumeration staff, but it carried with it the drawback that the said staff were quite inexperienced in statistical operations and that, to be successful, the number of groups to be identified in the analysis had to be restricted within the narrowest practicable limits. Again, the householders schedule, on which the information was originally recorded, required a statement of each person's date of birth and not his age as has been customary at a census; this involved the further innovation of conditioning the age groups to calendar years of birth rather than risk the error and confusion that would have been bound to arise if the enumerator had been asked to go through the mental process of translating each date of birth into current age. In consequence of these procedure restrictions, the number of groups identified throughout the published tables is limited to nine in respect of each sex, and, being calendar year of birth groups, they do not correspond with integral years of age owing to the fact that the enumeration took place at the end of the third quarter of 1939.

Both the year of birth groups and the corresponding ages as at date of enumeration are shown in the following table which sets out the aggregated records for Great Britain as a whole and for each of its national constituents.

The effect of the exclusion from the National Register populations of members of the Armed Forces is brought out in the age table by the shortage of males in comparison with females which is suddenly developed in the age group 14 $\frac{3}{4}$ -19 $\frac{3}{4}$. This deficiency should reach the maximum of its incidence in the next group and thereafter diminish to negligible proportions after about age 45. Its disappearance cannot however be detected from the comparative figures of the table, for before

that point is reached it is masked by the more normal excess of females which begins to be apparent at the adult ages, owing to the lower mortality and therefore the higher rate of survivorship experienced by that sex, and which increases with advancing age throughout the remainder of life.

From the lower half of the table, in which the distributions are set out in the form of age proportions per 1,000 total of each sex, it may be gathered that in Scotland the population is younger on average than in England and Wales. For many years the decremental forces both of mortality and migration have been higher in the north with the consequence that the proportional representation tends to be higher at the ages of infancy and childhood and lower at the later years of life.

Corresponding proportionate distributions of the male and female population of geographical regions of Great Britain, based on the age analyses of Table II, are summarised in the following table.

As with the national proportions, these distributions reflect in an aggregated form the combined effect of the forces of fertility, mortality and migration to which the areas have been subject over the whole of the life time of the existing populations. The differential incidence of the controlling factors has, as a rule, been sufficiently consistent and continuous to impart to the several regional distributions characteristic features which have persisted over many decades. But the continuity has been interrupted on the present occasion by the exceptional evacuation movements of recent weeks which bear no resemblance to normal migration either in quantity, direction or age incidence. The bulk transfer has been mainly that of children of the school age group but it extends also to younger infants as well; and it is marked in the table by significant depressions in the sending regions and corresponding augmentation in the reception areas at the two youngest age periods directly affected, accompanied by consequential increases and decreases in the respective proportions in the later age groups.

As has already been made clear, the only age records directly available from the National Register enumeration itself are those of the nine irregular age periods in which the statistics are presented in Tables II to IV of this volume and in the summaries of Tables J and K. Age periods involving fractions of a year of age however are not convenient for general reference or for ready comparison with census and other records which follow the more conventional type of quinquennial grouping 0-5, 5-10, etc., and it will often be of advantage to be able to subdivide or transform the nine standard groups, at any rate of the larger and more important populations, even at the risk of introducing an element of approximation in the resulting distribution. Means for this purpose are available in the information bearing on the age structure of the population which already exists from other sources, and for illustrative purposes use was made of the material found in the records of England and Wales, in respect of which estimates of the age distribution of the population are published each year in the Registrar-General's Statistical Review. As explained in those publications, the successive estimates since 1931 have been built up year by year from the census of 1931 by a survivorship process which, in relation to each year's operations, may be briefly described as (1) obtaining the year's deaths arising from the population at each age at the beginning of the year and treating the survivors as the population at the next higher age at the end of the year (2) completing the table by the addition of the population aged 0-1 at the end of the year, represented by the survivors at that date of the births which occurred in the year and (3) adjusting the result of the first two operations in respect of migrants with such age statistics as are available in respect of them. Of the elements entering into this computation, the record of births is believed to be precise and complete while that of deaths is complete in numbers and, though possibly subject to occasional age mis-statement, is probably no less reliable in that respect than that of a census enumeration. In the age assignment of migrants, there is more room for error; but the movement is known to be associated predominantly with the younger adult section of the community, and with the aid of the partial age records published in respect of migrants by the Board of Trade, the error will have been kept within fairly narrow limits.

The survivorship process thus described has been carried forward to the 29th September, 1939, the date of the National Register enumeration, and an independently estimated age distribution of the population by individual years of age is thus available which is comparable in point of time with the group distribution derived from the National Register. The successive steps in the process of assimilating the survivorship estimates to the National Register age group totals are set out in Table L.

The estimates as originally derived by survivorship from the 1931 census and subsequent births are shown in quinquennial groups of age in column 2. In the case of females, the estimates are comparable with the National Registration returns without further adjustment; but in respect of males they have first to be modified so as to exclude the non-civilian and shipping population excepted from National Registration. The total of 900 thousands already assigned for these classes in England and Wales has therefore been distributed by age on the basis of such age records as are available in respect of them (including a specific allowance for men called up under the Military Training Act of 1939) and deducted from the figures in the male section of column 2. The diminished estimates, which are now comparable with the National Register figures, are shown both by quinquennial age groups and by the National Register age groups in column 3.

The basic age totals yielded by the National Register enumeration are shown in column 4, and the differences between estimates and enumerated are set out in numerical and percentage form in the upper sections of columns 5 and 6. From the latter it can be inferred that the true age distribution is reproduced with little error over the bulk of its range by the survivorship estimates, and in this sense repeats the experience which has been gained from similar comparisons between estimated and enumerated at past censuses.

The trend of the differences is generally similar for each of the sexes. To what extent they have arisen through imperfections in the method of estimation and how far through original mis-statements of age by members of the public either at death or at enumeration it is impossible to test with the limited data available.

TABLE L.—ENGLAND AND WALES : DISTRIBUTION OF N.R. POPULATION BY QUINQUENNIAL GROUPS OF AGE.

(numbers in thousands)

Age group.	Survivorship Estimate as at 29 September, 1939.		National Register Population.

It is sufficient to observe that they are nowhere large and can therefore be transformed to quinquennial groups of age without risk of material error. This has been done by graphically distributing the basic differences in the upper portions of column 5 over individual years of age and reaggregating the units into quinquennial groups which are set out in the lower portions of column 5. Deducting the latter from the survivorship estimates of column 3, a population distribution by quinquennial groups of age is finally reached (col. 7) which conforms to the National Register distribution and at the same time preserves the known characteristics of the population structure and may therefore be confidently accepted as a close approximation to the actual distribution in 1939.

The transformation, as set out above, in strictness applies only to the population of England and Wales as a whole; and the same or equally satisfactory alternative methods should be used in respect of other populations whose characteristics are known. In their absence, first approximations to the required quinquennial distributions will usually be obtainable by the use of the percentages shown in column 8 of the table; and these should be sufficient for most purposes for which figures are likely to be required.

MARITAL CONDITION

In Table II are set out analyses by sex, age and marital condition of the National Register populations of England and Wales, Scotland and the Isle of Man and of their constituent regions, density aggregates, counties and large towns. In connection with these analyses, the reader must be reminded once again that, compared with similar census analyses, the males are on this occasion deficient in respect of non-civilians and shipping population excluded from the National Register. In discussing total populations and also the age incidence it has been possible, by reference to other sources of information, to indicate the effect these exclusions have had on the resulting figures but the information available does not extend to the marital status of the excluded classes. No adjustments in this direction are therefore possible, to the detriment, in consequence, of comparisons that might otherwise have been made between the respective marital distributions of males and females or between that of males in 1939 and the similar distributions at past censuses.

In the whole of Great Britain and the Isle of Man, of the total 21,393 thousand males enumerated, 10,203 or 47·7 per cent. were single, 10,299 (48·1 per cent.) married and the balance of 891 (4·2 per cent.) widowed or divorced; similarly of the total 24,217 thousand females enumerated, 11,178 or 46·2 per cent. were single, 10,778 (44·5 per cent.) married and 2,261 (9·3 per cent.) widowed or divorced.

In Great Britain alone, the numbers were of course fractionally less; they are summarised by age groups in Table M and compared there with the similar distribution of the 1931 census record.

From this table it will be observed that, in the eight years between 1931 and 1939, with an increase in the total female population of 3·7 per cent., the unmarried have declined by 5·7 per cent., simultaneously with increases between two and three times as large in both the married and widowed sections, viz. 13·4 and 12·5 per cent. respectively.

The whole of the reduction in the unmarried is located at the younger ages; and there is also a small decline in the numbers of widows in the earlier part of the age field, though this is more than counteracted by much greater increases at the later periods of life. The numbers of married, by way of contrast, exhibit considerable growth over all age periods; and it is of interest to note that in respect of the child-bearing period in particular, the married are not only more numerous by over 700,000 than they were in 1931, but that in regard to its incidence the rise is relatively highest at the earliest ages where it may accordingly be expected to exercise a greater influence on the ensuing birthrate.

The change in the incidence of the marital classes has been due partly to the general ageing of the population (that is to say, to the relatively heavier increases in the population at the later years of active adult life where the proportions of married are normally at their highest), and partly to the continuous and considerable increases in the frequencies of new marriages at practically all ages which have been a feature of recent years. The effect of the latter is clearly seen in the comparative figures of 1921–1939 shown for Great Britain in Table N which sets out the proportionate distributions per 1,000 total female population in each case and in Table O which shows the proportions of women married in each age group.

The rate of marrying amongst women is at its maximum between 20 and 25; and it will be seen that, of the 1939 population in this group 32·2 per cent. were returned as married, a proportion nearly a half as much again as the corresponding percentage of 1931 (23·7 per cent.). The relative increase in percentage married is even more marked at ages below 20; and though it diminishes after 25 it is still of moment up to age 45, a situation which could only have been brought about by a material increase in the numbers of new marriages. If the proportions of married in each age group had remained the same as they were in 1931, the total number of married women in 1939 would have amounted to 10,292 thousands instead of the 10,767 thousands enumerated. So that it may be said that of the total

1931–39 increase of one and a quarter millions in the number of married women in Great Britain, nearly two-thirds is due to the general advance in the age of the population and rather more than one-third to the increase in the marriage rates of the intervening period.

The proportions married in successive age groups increase with advancing age up to the 35–45 group, the new marriages during the earlier adult years being in excess of those terminated by the death of either partner. After 45 the terminations gain the ascendancy with a consequent diminution in the married section which continues thereafter throughout the remainder of life. It will be observed that the married frequency is at a maximum in the 35–45 groups with continuously descending proportions on either side for every one of the areas identified in Table O.

The most notable contrast exhibited in Table O is that disclosed by the frequencies in England and Wales as compared with those in Scotland or in the Isle of Man. Whereas in England and Wales 563 per thousand of the women over 14 $\frac{3}{4}$ years of age are married, in Scotland the proportion is as low as 495 per thousand. And as between the several subdivisions of the two countries, the

highest of the Scottish proportions (504 per thousand in the West Central region) is well below the lowest in England and Wales, viz. 520 per thousand in North and Central Wales (W2). Here again the differences are due to a combination of the same two factors, namely, the higher average age of the population and the higher incidence of new marriages in England and Wales. An indication of the latter is given by the proportions married in the earlier age groups, the comparable numbers in the $19\frac{3}{4}$ – $24\frac{3}{4}$ group being 328 per 1,000 for England and Wales against 275 for Scotland and 703 against 614 in the succeeding group $24\frac{3}{4}$ – $34\frac{3}{4}$. Amongst the regions of England and Wales the lowest place is, as already stated, assigned to North and Central Wales (W2). Here, the age percentages are, almost without exception, lower than those recorded for any other region in England and Wales. The highest age rates are, curiously enough, reserved for South Wales (W1), although the overall proportion is somewhat higher in the East Midlands (M2). Northumberland and Durham (N1) ranks high, as does also the West Riding of Yorkshire (W3) and the Eastern region. London and its neighbouring counties rank low in company with Lancashire (N4) and the South Western region.

In Scotland the proportions married are generally higher in the two regions of the central belt at the expense of the regions on either side, of which the lowest position in the whole of the table is that assigned to the Northern region.

Amongst the density aggregates, the age proportions consistently increase with decreasing density in England and Wales, the overall figures for Greater London, other County Boroughs, other smaller towns and Rural Districts being 546, 554, 570 and 583 respectively. In Scotland there is less regularity in the progressions of the proportions, the landward areas being lower than those of Small Burghs at the younger ages and those of the Small Burghs lower than the corresponding figures for Large Burghs at the more advanced ages of the scale.

EXPLANATORY NOTES

1. The 1939 statistics published in this volume in respect of Great Britain and the Isle of Man represent the population enumerated as at midnight 29th/30th September, 1939. In respect of Northern Ireland the figures may be regarded as corresponding approximately to the same date (*see* Introduction).

In all areas the 1939 populations exclude persons serving in and not on leave from His Majesty's Naval, Military or Air Forces and also persons on ships in port or in tidal waters.

2. In Table I areas scheduled by the Ministry of Health or Department of Health for Scotland as evacuation areas and neutral areas are distinguished respectively by a * and † placed against the name of the area. Reception areas form the remainder and are unmarked.

3. Comparative figures in respect of 1931 and 1938 in Table I relate to the several areas as constituted in September 1939.

4. The acreage quoted in Table I includes land and inland water in England and Wales but in Scotland and Northern Ireland excludes the larger rivers and lakes.

5. The spelling of place names follows generally that adopted by the Ordnance Survey Department.

6. The abbreviations A.C., C.B., Met. B., M.B., U.D., R.D., and C.P., denote respectively Administrative County, County Borough, Metropolitan Borough, Municipal Borough, Urban District, Rural District and Civil Parish.

7. The figures for Administrative Counties exclude those of Associated County Boroughs unless otherwise marked but include those of other large towns.

8. The constitutions of the Geographical Regions adopted throughout the volume are as follows:—

England and Wales.

<p><i>Greater London.</i> The area coincident with the City of London and Metropolitan Police Districts — approximately 15 miles radius from Charing Cross.</p> <p><i>South East.</i> Bedfordshire Berkshire. Buckinghamshire. Essex. Hertfordshire. Kent. London. Middlesex. Oxfordshire. Southampton. Surrey. Sussex, East. " West. Wight, Isle of.</p>	<p><i>North I.</i> Durham. Northumberland.</p> <p><i>North II.</i> Cumberland. Westmorland. Yorkshire, East Riding. " North Riding.</p> <p><i>North III.</i> Yorkshire, West Riding. York C.B.</p> <p><i>North IV.</i> Cheshire. Lancashire.</p> <p><i>Midland I.</i> Gloucestershire. Herefordshire. Shropshire. Staffordshire. Warwickshire. Worcestershire.</p>	<p><i>Midland II.</i> Derbyshire. Leicestershire. Northamptonshire. Nottinghamshire. Peterborough, Soke of.</p> <p><i>East.</i> Cambridgeshire. Ely, Isle of. Huntingdonshire. Lincolnshire— Parts of Holland. " Kesteven. " Lindsey. Norfolk. Rutlandshire. Suffolk, East. " West.</p> <p><i>South West.</i> Cornwall. Devonshire. Dorsetshire. Somersetshire. Wiltshire.</p>	<p><i>Wales I.</i> Brecknockshire. Carmarthenshire. Glamorganshire. Monmouthshire.</p> <p><i>Wales II.</i> Anglesey. Caernarvonshire. Cardiganshire. Denbighshire. Flintshire. Merionethshire. Montgomeryshire. Pembrokeshire. Radnorshire.</p>
---	--	--	---

Scotland.

<p><i>Northern.</i> Counties of Aberdeen. Angus (excluding City of Dundee). Argyll. Banff. Bute. Caithness. Inverness. Kincardine. Kinross. Moray. Nairn. Orkney. Perth. Ross and Cromarty. Sutherland. Zetland.</p>	<p><i>East Central.</i> City of Dundee. Counties of Clackmannan. Fife. Lothian, East. " West. Midlothian. Stirling.</p>	<p><i>West Central.</i> Counties of Ayr. Dunbarton. Lanark. Renfrew.</p>	<p><i>Southern.</i> Counties of Berwick. Dumfries. Kirkcudbright. Peebles. Roxburgh. Selkirk. Wigtown.</p>

Rivoli

THE COUNTY HALL,
LONDON, S.E.1

31st May, 1940.

Dear Daley,

Population statistics.

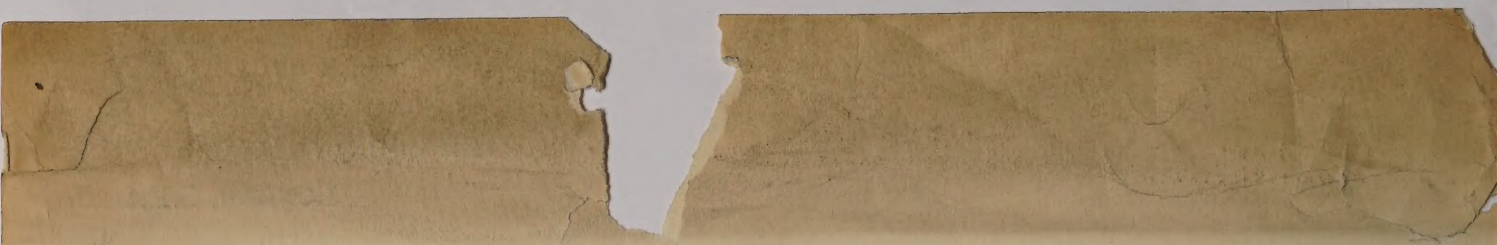

The enclosed volume is one of three which have been issued to the Council. No further copies are obtainable. The Ministry of Health have asked that, since the volume contains statistics of man-power, which the enemy could not otherwise obtain without difficulty, the volumes should be kept in proper custody. The Vice-Chairman of the Civil Defence and General Purposes Committee has authorised the issue of this volume to you on the clear understanding that you accept personal responsibility for its custody and for the exercise of a discretion as to the purposes for which and the persons by whom you will permit the volume to be consulted.

Yours very sincerely,

J.C. Salmon

PERSONAL

Dr. W.A.Daley, D.P.H.,
Medical Officer of Health.
